

## How to set up Cloudera Quickstart 5.13.0 on Virtual Box

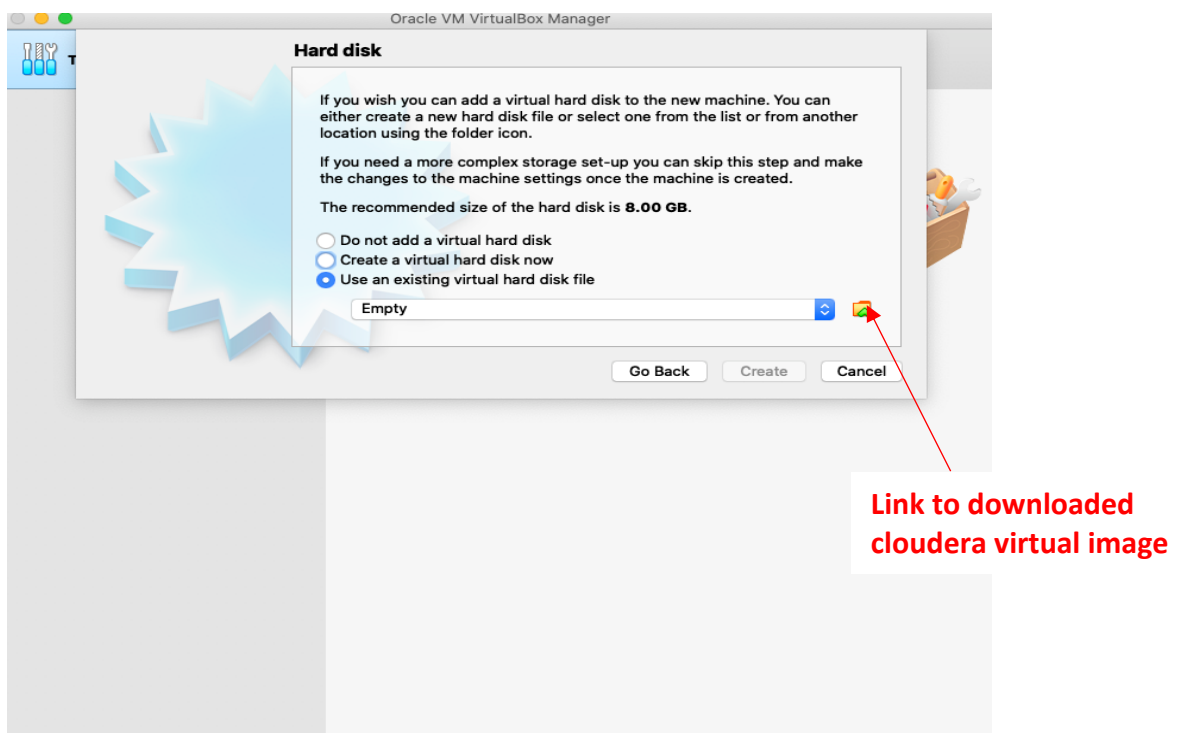

1. Depending on the OS, choose appropriate Virtual Box Installation
  - a. Window: Virtual Box 6.1.2-135663-Win.exe
  - b. Mac OS : Virtual Box 6.1.2-135662-OSX.dmg
2. After install Virtual Box, start the Virtual Box and create a new partition and folder for Cloudera VM.

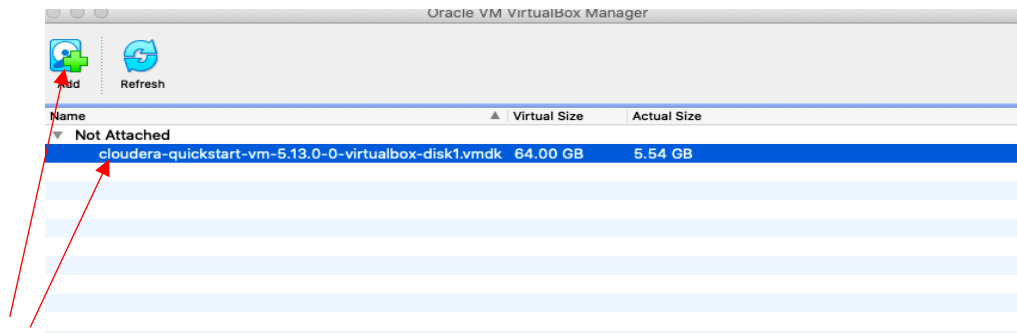

3. Select the RAM Size, minimum is 8GB

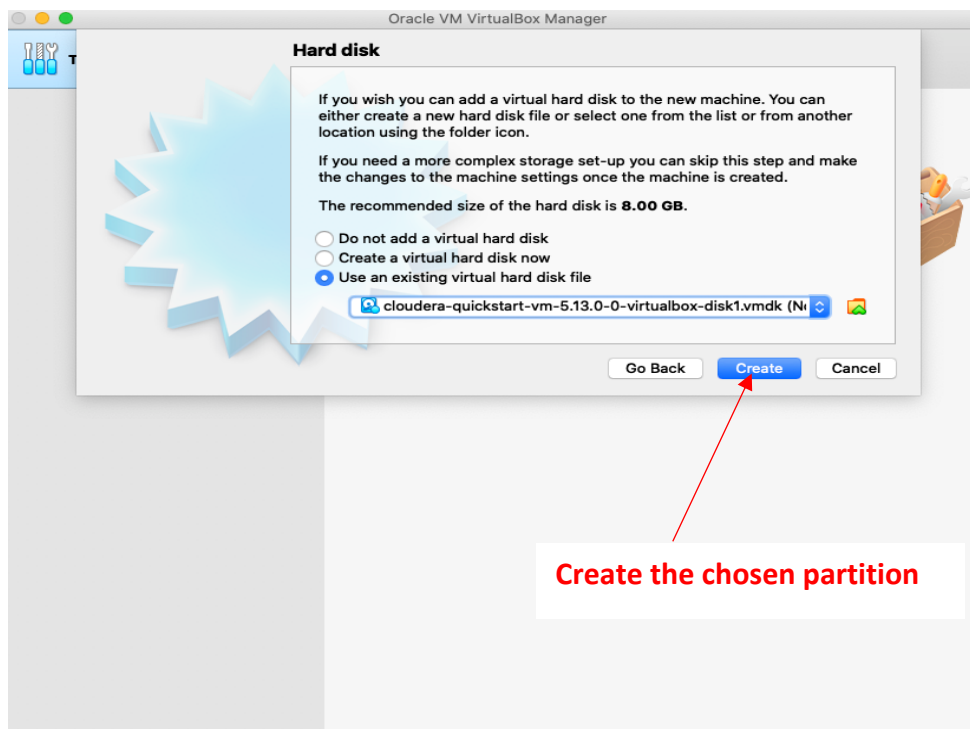

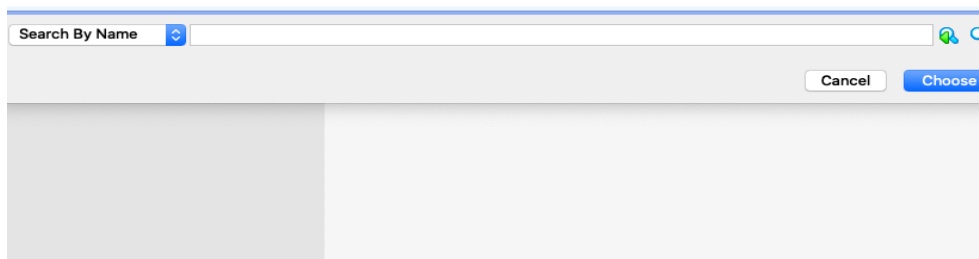

4. Install the Cloudera VM on the created partition

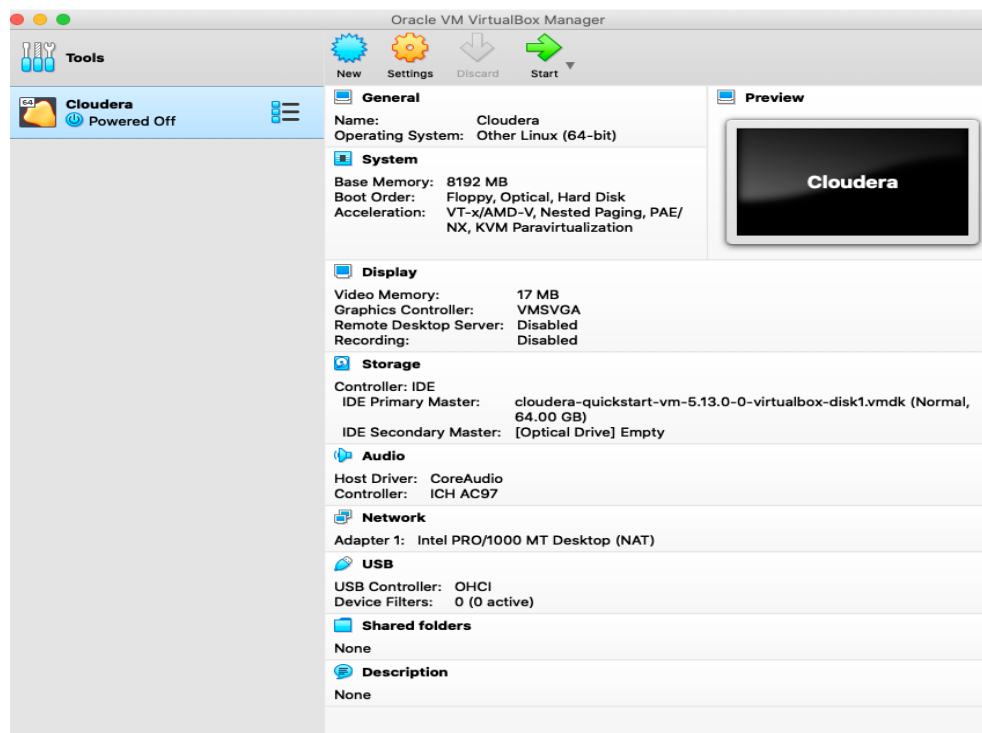

Add and choose the Cloudera quickStart VM vmdk from the directory it has been stored

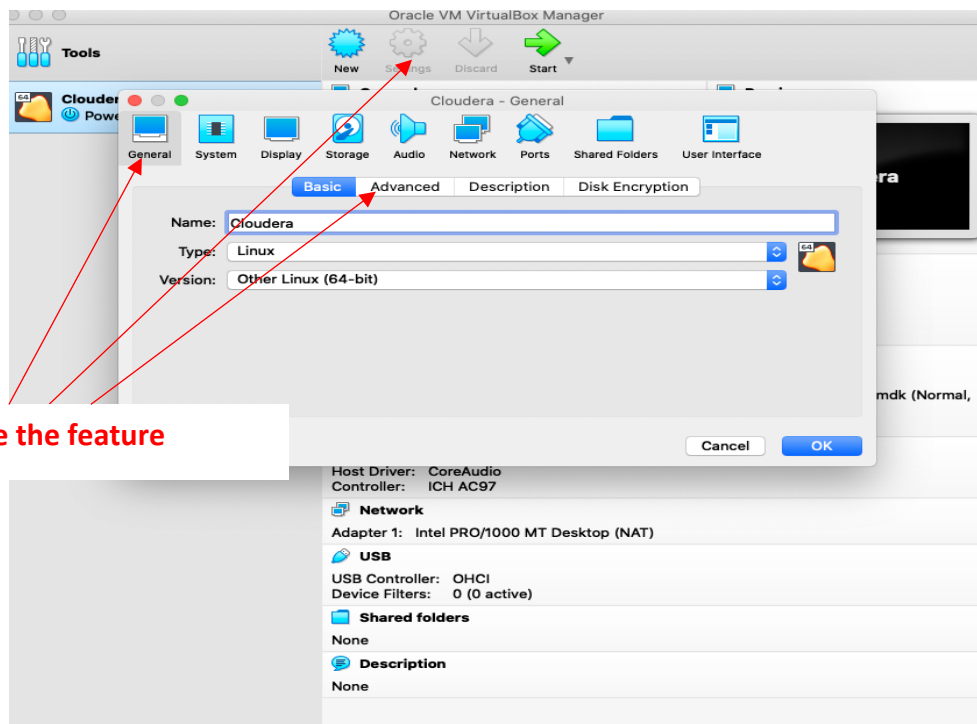

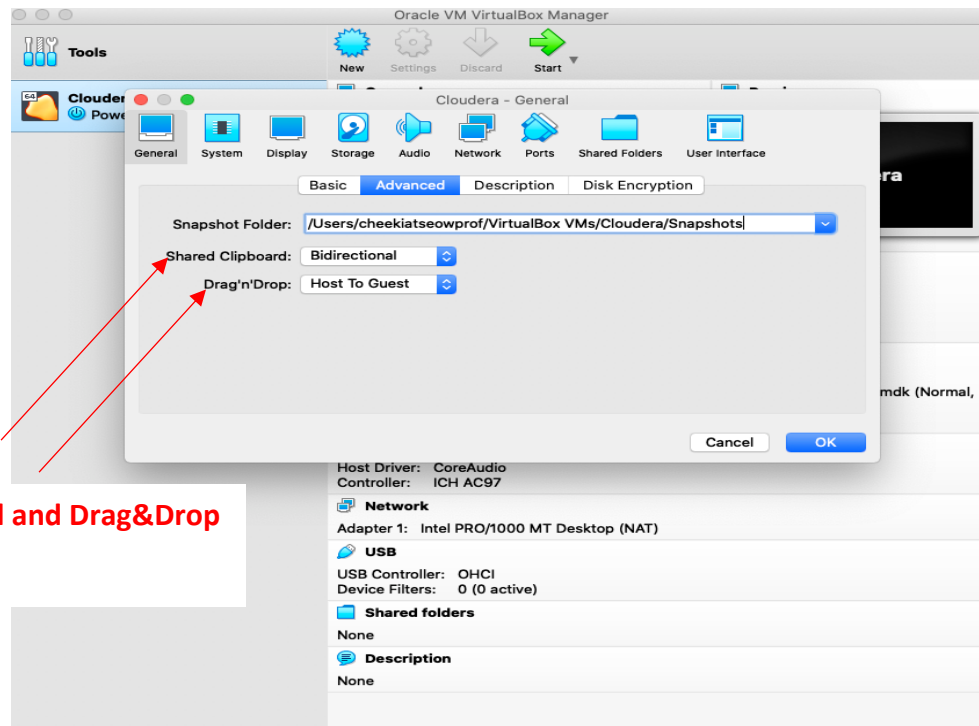

5. After successful installation of the Cloudera VM on virtual box

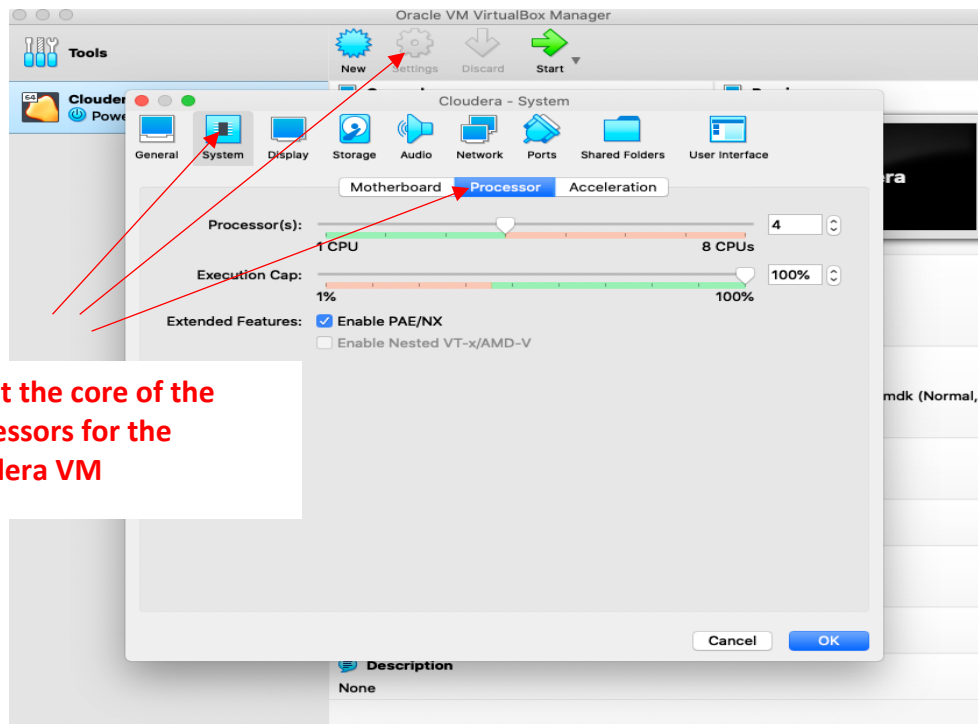

6. Configure the Cloudera for optimal performance.

- Go to Setting : General-Advanced Tabs to customize the drag & drop and clipboard feature

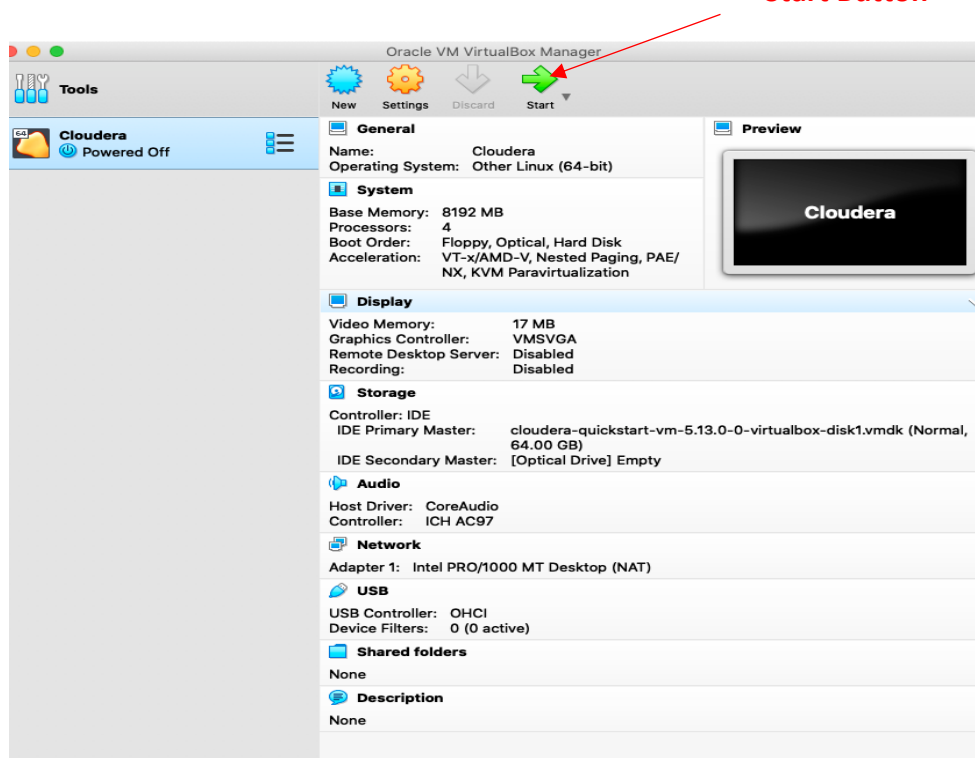

- b. Choose number of core processors for Cloudera VM. Choose the maximum core processors your computer has. If dual core, then select 2.

7. Power up the Cloudera VM by pressing the start button **Start Button**

8. Password and Login by default is cloudera
